

Class Feedback:

1. Linking to Printed PDFs:

- **Current Issue:** Each book link currently redirects to Goodreads, which may not align with the user experience you're aiming for. Users expect to access or download a printed PDF version of the book rather than being taken to an external site like Goodreads.
- **Solution:** Replace the external Goodreads links with direct links to downloadable PDFs of the respective books (if available). You can either store the PDFs on your server or link to a location where the PDFs are legally accessible. Ensure that the links are clear and lead to the correct downloadable files.

Implementation Steps:

- Upload the PDFs to your server or repository.
- Update the `href` attributes of the book links to point directly to the PDF files.
- Provide clear and descriptive text in the link, such as "Download PDF" or "View Book as PDF", to avoid confusion.

2. Image Skewing and Mobile Layout:

- **Current Issue:** On smaller resolutions (e.g., mobile devices), book images are being skewed and displayed awkwardly. This disrupts the user experience and makes the site appear less professional.
- **Solution:** Adjust the CSS to maintain the correct aspect ratio of images, ensuring they resize proportionally on smaller screens. Additionally, ensure that images are displayed in a single-column layout when viewed on mobile devices for a clean, responsive design.

Implementation Steps:

- Use CSS properties like `object-fit: cover;` and `max-width: 100%;` to prevent images from distorting.
- Add a media query to switch the book catalog layout to a single-column display on screens smaller than 768px, stacking the images and book titles vertically.
- Test the layout across different screen sizes to confirm that images retain their natural proportions and align neatly in one column on smaller screens.

3. About the App: Expanding the Creator's Philosophy:

- **Current Issue:** The "About the App" page lacks enough depth regarding the creator's philosophy, vision, and goals for the application.
- **Solution:** Expand this section to include more about your personal motivation, the problem you aim to solve with the app, and your broader philosophy on reading, learning, or technology. This section should highlight your passion for the project and convey the unique value your app offers to users.

Extended Content Ideas:

- **Inspiration:** Share what inspired you to create the library platform. Was it a personal challenge you faced while looking for books? Was there a gap in existing solutions?
- **Vision:** Explain your long-term vision for the app. How do you see it evolving? What impact do you hope it will have on readers and the literary community?
- **Philosophy on Reading:** Share your thoughts on the importance of reading. Perhaps you can discuss the value of reading for personal growth, knowledge expansion, and fostering empathy.
- **User-Centric Design:** Highlight your commitment to providing a seamless user experience. Emphasize how the app's features (like the search functionality, PDF access, and personalized recommendations) reflect your user-first approach.
- **Community Building:** If applicable, discuss the role of community features in the app, such as discussions, reviews, or sharing book recommendations. This can further emphasize the collaborative nature of your platform.
